                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a CC method for identifying a compound or small molecule that regulates the CC extivity in an animal of one or more of the polypeptides given in the greativity in an enthod for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more CC polypeptides or their antibodies. The polynucleotide or more compound that modulates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction CC injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene CC therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: CT the sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic form directly from WIPO at ftp. wipo.int/pub/published_pct_sequences.

                The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            14-AUG-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

þ

that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal times of a first sequence claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent

The invention discloses a composition comprising two or more isolated or human polynucleotides or a polynucleotide which represents a fragme derivative or allelic variation of the nucleic acid sequence. Also

fragment,

rat

New composition comprising medicament for

two or mo

or more

nore isolated ; y pain in an a

d polypeptides, useful for animal.

The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of a second specialised cell type, under two experimental conditions, and identifying a gene that is differentially regulated in the two specialised cell types under experimental conditions. ABV7873-ABV78116 and ABP65061-ABP65257 were identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a patient, for manufacture of a medicament for treating hypoxia-regulated conditions, and for regulating tumourigenesis, angiogenesis, appotosis, bathological response to hypoxia conditions, or hypoxic-associated pathology in a patient. The coding sequences and proteins are also useful for monitoring the therapeutic treatment of a disease or physiological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                08-DEC-2000; 2000GB-00030076.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABP65252;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              autoimmune patients. La and Ro antigens sometimes reside on the same cellular ribonucleoprotein particle; most La patients contain some Rc antibodies and vice versa. La cDNA has been isolated from a human li library. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying a gene involved in disease for treating hypoxia-regulated conditions, comprises comparing the transcriptome/proteome of two cell types under different conditions and identifying a differentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               13-JUN-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a activity in an animal of one or more of the polynucleotides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more or more polynucleotides or their antibodies. The polynucleotide or the compound that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various blochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 viral life cycle; antiviral therapy; pharmaceutical; veterinary;

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs and even in those cases where therefore be used to obtain full length cDNAs are genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedu

                                                                                                                                                                                                The present invention relates to peptides and methods of inhibiting the regalication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various blockemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               coxsackie virus, encephalomyocarditis virus, foot-and-mouth disease virus, echo virus, hepatitis C virus, infectious bronchitis virus, di and human hepatitis B virus, and vesicular stomatitis virus. The pepalso inhibits replication of the above viruses. The LAP peptide selectively inhibits viral protein translation, and is therefore not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  internal ribosome entry site initiated translation; La antigen prival life cycle; antiviral therapy; pharmaceutical; veterinary agricultural; horticultural; virucide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Viral replication inhibitor, IRES initiated translation, LAP, internal ribosome entry site initiated translation, La antige

                                                                                                                                                                                                                                                                                                             The present invention relates to peptides and methods of inhibiting the reglication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Viral replication inhibitor; IRES initiated translation; LAP; internal ribosome entry site initiated translation; La antigen p viral life cycle; antiviral therapy; pharmaceutical; veterinary; agricultural; horticultural; virucide; mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    in pharmaceutical, veterinary or agricultural/horticultural app

The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.

This sequence is the La autoantigen binding domain (LAP). LAP is a cellular protein which binds to an internal ribosome entry site (IRES). The peptide is used to inhibit mRNA translation, viral protein translation or viral replication. Viral mRNA translation is initiated at the IRES and the LAP peptide prevents translation initiation factors from binding at the site. The peptide can be used alone or in combination with an inhibitor RNA (IRNA see AAZ45200). The LAP peptide is useful as an antiviral agent, which works through the inhibition of mRNA translation, especially viral mRNA. Examples of viruses which can be inhibited are picornavirus, flavivirus, coronavirus, hepatitis A B or C viruses, rhabdovirus, adenovirus, and parainfluenza virus, poliovirus, rhinovirus,

                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLI6176-ABLI6176-ABLI6177), expressed DNA sequences (ABLI61840-ABLI6175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Viral replication inhibitor; IRBS initiated translation; LAP; internal ribosome entry site initiated translation; La antigen viral life cycle, antiviral therapy; pharmaceutical; veterinary agricultural; horticultural; virucide.

New compound containing acidic and aromatic amino acids, useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.

Claim 1; Page 15; 19pp; English.

XAXFXBXBXBXBXBXFXFXFXFXFXBXSSSSSSSSXSXX The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents

                                                                                                                                                                                                                                                                                                                                                                                                          polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polypucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjects to the sequence of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2003-268312/26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            that is differentially expressed in neuronal tissue of a first animal composition of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating activity in an animal of one or more of the polypeptides given in the polypeptides or their antibodies. The polypucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (Shun)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:
                                                                                                                                                                                                                                                                                                                                          Matches

The polynuclectide or the compound that modulates its activity is useful for preparing a medicament for treating and a pharmaceutical composition comprising the one or more that its activity is useful for preparing a medicament for treating and the compound that the compound that the compound that according to the compound that the compound that according the compound that the compound that according the compound that the compound that the compound that according the compound that the compound that the compound that according the compound that t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            comprising the vector, a method for localityly a university which is differentially regulated in an animal subjected to pain and which is differentially regulated in an animal subjected to pain and which is differentially regulated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  14-AUG-2001; 2001US-0312147P.

The polynucleotide or the compound that polypeptides or their antibodies. The polynucleotide or the compound that its activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more compound (e.g. spinal segmental nerve injury (Chung), chronic constriction confiction, which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed composition to the printed at the printed and composition is a patent of the printed at the printed composition form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at

cc subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially cc expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the cc polynucleotides, a method for producing a pharmaceutical composition, a cc polynucleotides, a method for producing a pharmaceutical composition, a crivity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more compound useful in treating compoundates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction cinjury (CCI) and spared nerve injury (Chung), chronic constriction the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal that is differentially expressed in neuronal tissue of a first animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-NOV-2001; 2001US-0346382P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The human lupus antigen (La) is diagnostic for Sjogren's syndrome, as well as occurring in systemic lupus erthematosus patients. The La protein is clinically related to the Ro protein that is highly common among autoimmune patients. La and Ro antigens sometimes reside on the same cellular ribonucleoprotein particle; most La patients contain some Ro antibodies and vice versa. La cDNA has been isolated from a human liver library. (Updated on 25-MAR-2003 to correct PF field.)
